

***BLOODBORNE PATHOGENS / UNIVERSAL  
PRECAUTIONS TEST***

NAME: \_\_\_\_\_

DATE: \_\_\_\_\_

- |                                                                                                                                                              |   |   |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------|---|---|
| 1. HIV means HEPATITIS IMMUNODEFICIENCY VIRUS.                                                                                                               | T | F |
| 2. HBV means HEPATITIS B VIRUS.                                                                                                                              | T | F |
| 3. HIV can cause AIDS.                                                                                                                                       | T | F |
| 4. HBV causes LIVER INFLAMMATION.                                                                                                                            | T | F |
| 5. Protective equipment such as gloves, masks, and face shields must be provided by the worker at his/her own expense.                                       | T | F |
| 6. "UNIVERSAL PRECAUTIONS" is a plan that treats all blood and body fluids in the workplace as if they are contaminated by bloodborne pathogens.             | T | F |
| 7. Sweat is a body fluid the "UNIVERSAL PRECAUTIONS" plan requires you to treat as contaminated bloodborne pathogens.                                        | T | F |
| 8. All workers who have routine exposure to blood or other potentially infectious materials should receive the Hepatitis B vaccine at no cost to themselves. | T | F |
| 9. The Hepatitis B vaccine is given in three doses over a 6 month period.                                                                                    | T | F |
| 10. There is no vaccine for the prevention of HIV infection.                                                                                                 | T | F |

- |                                                                                                                                                                          |   |   |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|---|
| 11. An employee who is covered under the OSHA Bloodborne Pathogens Standard to receive a Hepatitis B vaccine may choose to refuse it if he/she signs a declination form. | T | F |
| 12. Drinking coffee is forbidden in areas where there may be exposure to bloodborne pathogens.                                                                           | T | F |
| 13. Hand washing with soap and warm water is an important example of work practice control.                                                                              | T | F |
| 14. If you get contaminated blood or body fluids in your eyes, rinse them out with water and report the incident to your employer.                                       | T | F |
| 15. More healthcare workers contract Hepatitis than AIDS.                                                                                                                | T | F |
| 16. If a healthcare worker leaves the examination room to take a phone call, his/her gloves should be changed before touching the same patient again.                    | T | F |
| 17. Gowns are worn to protect the healthcare workers skin and street clothing from body fluid.                                                                           | T | F |
